

EFFETTO METALLICO

METALLIC EFFECT

ACRILIC COLOURS WITH METALLIC EFFECTS.

CHARACTERISTICS

EFFETTO METALLICO, is an excellent replacement for traditional solvent-based metallic enamels. The surface obtained does not undergo the darkening effect which occurs due to oxidation and so offers an improved and longer-lasting decorative effect. All EFFETTO METALLICO colours may be used pure or mixed to one another to obtain a plenty of intermediate and special colours which could be much appreciated in the world of fine arts and wall decorations. EFFETTO METALLICO shades resist excellently outdoors. For satisfying the modern taste of marvellous decorations for interior/exterior applications EFFETTO METALLICO colours can be mixed with an acrylic neutral transparent glaze.

APPLICATION

With brush, roller or spray (nozzle 1,5 – 1,7 / pressure 2 – 2,5) as supplied or thinned with 5-10% of water on a wide range of materials such as glass, wood, plastic, paper, asbestos cement (Eternit), polystyrene and iron coated with anti-rust paint. The metallic effects of EFFETTO METALLICO are particularly suitable for cloths and fabrics. For increased performance, when a glossier surface which offers greater resistance to imprints, cracking, water and particularly harsh climatic condition is required, the film of EFFETTO METALLICO may be covered with a coat of colourless transparent varnish.

For obtaining particularly metallic effects on walls, it is necessary to use at least 50% of EFFETTO METALLICO mixed with LA VELATURA. It is possible to obtain different types of decorative effects by using glove, pad, sponge, roll, etc..

COVERAGE

5-6 sqm/litre with two coats, depending on the type of support and absorption.

DRYING TIME

30' on surface, 1-2 hours in depth.

SPECIFIC WEIGHT

Approx. 1,100 at 20° C

PLASTIC PACKAGING

500 ml
