

PRODUCT DATA SHEET

MÉTALLIQUE(METALLIC EFFECT)

ACRILIC COLOURS WITH METALLIC EFFECTS.

CHARACTERISTICS

MÉTALLIQUE, is an excellent replacement for traditional solvent-based metallic enamels. The surface obtained does not undergo the darkening effect which occurs due to oxidation and so offers an improved and longer-lasting decorative effect. All **MÉTALLIQUE** colours may be used pure or mixed to one another to obtain a plenty of intermediate and special colours which could be much appreciated in the world of fine arts and wall decorations. **MÉTALLIQUE** shades resist excellently outdoors.

For satisfying the modern taste of marvellous decorations for interior/exterior applications **MÉTALLIQUE** colours can be mixed with an acrylic neutral transparent glaze.

APPLICATION

With brush, roller or spray (nozzle 1,5 – 1,7 / pressure 2 – 2,5) as supplied or thinned with 5-10% of water on a wide range of materials such as glass, wood, plastic, paper, asbestos cement (Eternit), polystyrene and iron coated with anti-rust paint. The metallic effects of **MÉTALLIQUE** are particularly suitable for cloths and fabrics. For increased performance, when a glossier surface which offers greater resistance to imprints, cracking, water and particularly harsh climatic condition is required, the film of **MÉTALLIQUE** may be covered with a coat of colourless transparent varnish.

For obtaining particularly metallic effects on walls, it is necessary to use at least 50% of **MÉTALLIQUE** mixed with LA VELATURA. It is possible to obtain different types of decorative effects by using glove, pad, sponge, roll, etc..

THECNICAL DATA

Coverage : 5-6 sqm/litre with two coats, depending on the type of support and absorption.

Drying time : 30' on surface, 1-2 hours in depth.

Specific Weight : Approx. 1,100 at 20° C

Plastic packaging : 500 ml
